ETHERIC NOTES - IV

by

Gerald Light

Over the years I have probably written enough pages to make up 30-40 novels. What I wrote about was something quite familiar to me, and reasonably familiar to my readers. At any rate, all of us had had some preparation of both our mentation and our emotions in re - spect to the ideas in my essays and articles. But to write of Etheria in such a fashion is about as hopeful as reciting The Illiad to the gold-fish in my lily pond expecting them to follow me verse by wondrous verse. Nor is my illustration ill-chosen. Were you to spend an hour with me at the close of a lecture and observe the con- fusion in our "question and answer" times you would be more hopeful of the gold-fish catching on. And this is not the slightest dis - paragement to my listeners..... So much by way of preamble to a few remarks on my statement, that "frequently, in a most literal sense, the Aeroforms are the actual bodies of the Etherians."

Let me quote you: "As you know, the first and very obvious and natural objection of the 'average' man will be something like this: 'I can understand' (he may say) 'something about the idealist point of view as to the nature of the external world, and so on. I can even understand that an Etheric being might create a Disc as a thought- form and identify himself with it - and it could be of any shape and size. But look at all the small physical phenomena which go along with this. Why should these occur at all. I mean sounds, colors, lights, falls of such stuff as "tin-foil" - which evaporates; radia- tion of heat, odours, radiant energies, etc. All of these are gross physical phenomena.'", etc.,etc.

You believe Mr. Average will be disturbed by these extraneous manifestations, these "small phenomena" because they apparently are not, or need not be, a part of the Etherians Disc-body (or any other size, shape or appearance his etheric body may assume)? You say, "In short, it is the simple, obvious physical data which have to be taken care of, I think, before even the need for a 4-D theory can be stressed."

Well, before we can allow Average-Man any conclusions of an em - pirical nature on the bodies of the Disc-people, let us see what he knows and understands about his OWN body. And at the outset I am afraid we will have to dismiss the average-man and ask the special- ist in the human body what he understands about our forms. The doc- tor, especially the surgeon who should know his way around our or- ganic dwellings, may be highly conversant with the location of

Etheric Notes-IV (cont'd)

every tissue, nerve, vein, muscle and bone of these earthly bodies. They may know them intimately. They may know the HOW of them. But of the WHY they are sensibly silent. One of the most illumined of these scientists, Dr. Carrell, succeeded in keeping a piece of tissue living for years. He built an artificial heart which, I am told, is still beating. He clearly demonstrated his grasp of the HOW of our bodily functions---and he boldly admitted his total ignorance as to WHY it functions. "It can hardly be",he reasoned, "for the mere perfecting of the form. Nature has already produced thousands of highly perfected human bodies in the primitive races; forms beside which our civilized bodies are pitiful indeed."

Whence the body, in the first place? Whence, indeed, save from pure mind! For how can we conceive of the invisible dot of original spermatia as anything BUT mind? From the invisible point of light (as Dr. Carrell calls it) comes the instrument, the machine, the space-time-ship which we call our body. From this invisible dot, endlessly expanded, comes the full-grown man. Or, should he not be large enough to make the issue sufficiently impressive, take the elephant, or his greater ancestor, the mastadon. For that matter, take a dinosaur if it will help any; for after all, it is largely a matter of our level of perception, our point of observation which enables us, or compels us, to draw our conclusions (all of which can be totally inaccurate, or biased.) Doubtless, a flea hopping heroically up and down the vertebrae of a dinosaur would report it to be a great chain of mountains. And probably his less vigorous relative, a louse, struggling through the mass of hair on a human head would insist that it was a forest.

If, as you say, "it is the simple, obvious physical data which will have to be taken care of "first, then may I suggest that if any volunteer of our average-man ranks will step into my library I can quickly dazzle, bewilder and overwhelm him with a veritable host of "small phenomena" functioning on and in living tissue, organic bodies, animal AND human forms that will make any such phenomena from space - ships and saucers fade quickly into the equal of nothingness. Everything anyone has ever seen in connection with an Aeroform, be it Saucer, Disc, Cigar, Wheel, or whatnot, can be seen also in connection with the normal functioning of organic life, of animal forms, and human anatomy. Is it necessary for me to remind the average-man of the fabulously practical conveniences Nature has developed in myriads of animal-forms from the tiny amoeba to the one called Man? If you wish I can fill up the entire issue of ROUND ROBIN simply itemizing the remarkable functions of zoological life (including human organs) which bear an amazing similarity to every type of machines known to us.

Etheric Notes - IV (cont'd)

The Aeroforms ARE living substance floating in the fluids of the great Etheric tides. (Some may prefer to call it "mind-substance".)

Do you feel that it is still necessary for me to go into detail on the many and brilliant duplications in Nature of our mechanical sciences? It is said that in our human bodies there is every principle known to mechanics and electronics. The popping of our tiny lung-cells, allowing us to breathe, is compared to the combustion engine which powers our autos. The heart has a marvelous system of locks and valves which balances the flow of blood, and its pressure, through the body. These are comparisons which any student worthy of the name can gather for himself by the dozens.

If he turns outside himself he will be met with a simply bewildering collection of mechanical principles, scientifically developed and perfected, in the tiny and apparently inconsequential insect life of his garden.

In Louisiana last summer I was fascinated with the spectacle of thousands of fire-flies lighting the black forests as if by magic. These were not glow-worms, with the soft, golden glow. They projected a flash of intense white light which was so bright that I was blinded for a moment or so if they were near my face.

Perhaps Mr. Average is by now biting his nails as he attempts to masticate the idea of the Disc-bodies being of solid steel, or better, "Materials unknown to our science." I doubt if he will pause for a moment and wonder at the hardness of his nails and the fact that it does not hurt to bite them and that he actually has no sensitivity in them. And that he can trim them, painlessly, and cast the bits away with no grief, no sense of loss, no psychological complex to suffer. Mr. Average is indeed a marvelous machine of seven supreme cylinders, guaranteed to give more "horse-power" and more lasting service than any contraption his money can buy. And he has in him every chemical substance indigenous to our planet; not necessarily in the identical combinations existing in our globe, but so the Etherians insist, instantly available to him, in his body, if he so wishes.

As far as hardness, solidity, indestructibility goes, look again at Nature. Think of the mammoths of old, dinosaurs and such, which were little else than walking fortresses. If that troubles you, Mr. Average, watch the beetles in your garden. Some are practically indestructible. (For that matter, did you ever try to smash a flea by your fingertips?) In India there are butterflies, gorgeous things, which will attack a grown man as quickly as a kitten. And they launch a gas attack which will knock a human flat if he gets enough of it. These same little devils come from a cocoon which is so hard you could not break it with a hammer. The natives boil them, to kill the larvae, and then make necklaces of them. But if the tiny

Etheric Notes - IV (cont'd)

worm is allowed to reach maturity, he somehow generates enough explosive power to shatter one end of the chrysalis. The natives think it great fun to gather a handful of the cocoons, near hatching time, and hide them in bed pillows or blankets to frighten old people when they start to pop open.

So what does all this have to do with our first consideration: The incredible statement that the Aeroforms, in actuality, are the literal bodies of beings who live in Etheria? It has to do with my attempts to free Mr. Average-Man from his totally inadequate conceptions of what may, or could, constitute a body.

No one, average or otherwise, will be able to comprehend a situation which is without parallel in our metaphysical systems until he begins to understand the mental nature of matter, or the material nature of mind. This has nothing to do with the simple aspects of "Mental-Science" as studied and promoted by various groups of "New-Thoughtists." We are dealing with a substance, a force, an element of consciousness about which not only our contemporary scientists know nothing---but with which our metaphysical arbiters are totally ignorant. And for the plain and simple fact that this substance concerns planes, zones or vibrations of thought no modern or ancient school of esoteric wisdom has more than dimly suspected.

The existence, not only of this substance and its various vibrational divisions, but of the beings living within it, will shortly be proven through the discovery of a second satellite of our earth. This moon, and several others in a company of satellites moving at great speed around our globe, too fast to be photographed by present-day cameras, will shortly come closer and prove their existence in an undeniable fashion. The bodies of the beings occupying these tiny satellites will in all probability prove to be completely unorthodox insofar as flesh and blood forms are known to us. I trust that Mr. Average-Man does not find it too great a strain on his powers of endurance to witness this manifestation of inter-planetary communication.

The difficulty which we, as humans, experience in knowing ourselves as either mind or substance is unquestionably the reason for our instinctive resistance to this remarkable feature of using our bodies as machines, in the most actual practical and literal sense.

Few of us have any real comprehension of the basic features of either our bodies or our so-called minds. And little is to be gained here by going into that bewildering array of technical distinctions which various systems have succeeded in making, over the ages, between mind, substance, energy, will, consciousness, etc.

Etheric Notes - IV (cont'd)

However, here is a point which may be of help to those few intrepid adventurers who are thrilled with the possibilities of duplicating the phenomenal aspects of the Etherians and their body-control: There will come a change, a development, an addition in one's mind, or that which we feel must be mind. This development might be likened to the "illuminations" which most religions affirm as a part of their tenants; or it might considered as one of the "initiations" which so many students of the occult and mystic paths expect, and often declare they have experienced. There will indeed come a change in one's mentality---and also in one's ability to feel. By feeling I mean our ability to know or cognize through any or all of our so-called "senses"--as well as several additional faculties which now lie dormant in most of us, but which will suddenly spring into action, as it were, and produce new, strange, or peculiar results.

There is a definite procedure the student of earth MUST follow if he is to touch these new dimensions, these etheric potentials, not only with safety but with practical results. Unquestionably, mystics, yogis, sadhus and students of the Ancient Wisdom have touched these potencies in moments of intense absorption. But few if any have, or seem to have, comprehended just what they touched, and grasped its essentially etheric nature. I recall with amusement the various attempts I made in Shanti Niketan to associate myself with a flower, a butterfly, even a cobra---in order to experience (as I was told I would) the consciousness ofthese creatures. I once made Samyama on an elephant (with the intention of bringing into my body some of its enormous strength) but only succeeded in having the creature approach me with a suspicious glare in his eye which completely terminated my meditation and ended with me in the flowerbed in a state of total panic. (Possibly the same sort of panic which will overwhelm thousands as they are compelled to realize that when they meet the Saucers and Aeroforms they are meeting the very person and presence of the Beings from the Great Etherian Planes of Mind.

Little by little, I can help a few to a sensible grasp of these amazing features of mind as it expresses in other dimensions, other worlds, other forms and bodies. But it will be a slow, discouraging and difficult task. I am ready and willing however, to attempt it--should anyone care to join me in such a strange project.

Cordially,

Gerald Light.

March 15, 1954.

THE GROWING WINDSHIELD DAMAGE PHENOMENON

Suggesting Clues To Solution Of A Mystery With Serious Implications.

- (by Edward S. Schultz) -

The facts about the "phantom missiles" that have been so mysteriously piercing car windshields on a stretch of roadway near London, England, are so well known to those who interest themselves in such things that it needs no elaboration here.

However, the phenomenon has now broken out in North America on such a large and alarming scale that it completely eclipses the London happenings. First reports seemed to confine this new epidemic of windshield damage to the state of Washington in general, and the town of Bellingham in particular. In a single week, in that area, over 1500 windshields plus a generous percentage of store and house windows were damaged. At this writing the above damage may have doubled. In a few days, reports of similar damage to glass came from wider areas, i.e., Seattle, Canada, Chicago and, at this writing, press reports tell about the weird happenings in areas covering nine states. By the time this appears in print, it may cover most of the United States, a good part of Canada, and possibly south of the Rio Grande.

The reported glass damage takes three forms; i.e., complete perforation of windshield glass, as if struck by a bullet, stone, pellet, or equivalent missile; a cracking of the glass in a pattern radiating from a center or, a pock-mark pattern over the glass surface. Some windshields are reported to have shattered into "a thousand tiny pieces." The damage now includes greenhouse glass, airplane cockpit glass and even eyeglasses.

Although, most windshields seem to be damaged while the car is in motion; there are also reports of parked cars suffering similar damage, sometimes while the motorist is looking at the glass. This would seem to be a cumulative effect after the car has been in motion. Curiously enough...and this is very significant... in no case, where the windshield has been apparently pierced, as if by a missile, have there been any reports of any occupant of a car being struck or injured by the phantom objects. A missile capable of piercing windshield glass could easily hurt or kill the driver, etc. Nor, as far as I know, have there been any reports of the penetrating missile making a second hole on the way out of the car.

As is usual in such happenings, a wide range of guesswork has come into play as to "what or who dunit". It was first thought to be the work of hoodlums or pranksters, with B-B gadgets. This had to be abandoned as the damaged cars ran into thousands and it was realized that a mobilization of the entire hoodlum population would not be able to wreak so much havoc. Nor, could so many of them escape detection in at least some instances.

Then came the orthodox scientific "explanations", guesses, etc., and I have seen none offered whatsoever that makes any sense in the light of the observed phenomenon. The prize nitwit "explanation" erupted from a Seattle lab. i.e., that it is a product of "5% hoodlumism and 95% hysteria". This would indicate that mounting thousands of windshields and other glass installations are subject to "hysteria" and only imagine that they have been shattered, pierced, or pock-marked. If this is true, a clinic for neurotic windshields, with this malady, would be a number-one need. One University professor has clinched his claim to undying fame by asserting - "I'd say those cars have been driving through a dust storm."

I will venture to offer two very possible and probable explanations for the phenomenon. Clues that will fit the observed facts a great deal closer than anything offered, so far, by anyone in or out of authority. In due time, perhaps soon, one of these theories will emerge as the one and only solution.

--- ---

A -- RADIOACTIVE BY-PRODUCTS IN THE AIR: I postulate a chemical, radio-chemical, nuclear or sub-nuclear reaction on the glass from radioactive by-products, "fall-outs", etc. These may originate from the "fission-fusion" A- or H-bomb tests that have been going on in the Pacific. Or, some new and different atomic test or experiment made by the U.S. or Russia. And/or, a cumulative effect from the exhaust stack radioactive wastes from such atomic processing plants as the one at Hanford, Washington, located in the northwest, where most of the glass damage gained impetus. However, in terms of the radioactive clue, I lean heavily toward the A- and H-bomb explosions, as being directly or indirectly responsible.

It must be noted that the reaction between the glass and radioactive particles or nuclear radiations in the atmosphere could fall within a known or still unknown pattern of nuclear physics. Despite all progress, almost all of which is in the lethal class, nuclear physics is still in embryo and, I have been predicting for quite some time, that one or more big lessons in this field will be learned by accident, possibly at a cost of more lives than I would care to predict.

Therefore, the reaction on the glass may have a nuclear or radiochemical end result regardless of whether the bomb test "fall-out" is itself radioactive or not. It may not be until or unless a critical amount of the substance accumulates on the glass. However, some real and detailed testing of the "fall-outs" are in order, both for the known and the less known radiations. There isn't too much known about the possible role of mesons in damage of this kind. And.... how about the neutrino? Then, too, hydrogen bomb explosions increase the total of radioactive Carbon-14 in the atmosphere. The role of the known bomb "fall-outs" and the known radiations should be studied, plus the radiochemical role of mesons, Carbon-14,

neutrinos (possibly) etc. Some of the residue on the glass is reported to be a flake and soot-like substance. This would indicate a looking into its Carbon-14 content, etc.

I am merely trying to blaze a trail into the unknown, and cannot pretend to supply all the answers in one article. But I will toy with a few additional questions of a more detailed nature. For instance:

Why should the glass damaging reaction first occur in the Pacific northwestern part of the U.S.? First, westerly winds bringing their load of radioactive products from the Pacific bomb tests. The Hanford atomic plant, if at all responsible, is right in that area. Later on, as has been noted, the windborne bomb wastes have been dispersing into more easterly states.

Why would the bomb test products (chemical or radioactive) so selectively affect glass? Because, at least one of the ingredients of the glass may be vulnerable. The weak or affected link in the glass may be Silicon.

Why would the reaction affect windshield glass first, or more, than other glass installations? First, windshield glass, in broadside motion against the air, can accumulate more of the substance in a given time. Second, there are even more reports of other kinds of glass being affected. Third, if and when this phenomenon gets into real stride, there may be little if any such selectivity.

Why would the reaction, in so many instances, actually pierce the glass, with shattering force, as if penetrated by a missile? Here, I will postulate something for those in authority to ponder over. My theory is that, at times, something like a critical amount of the disturbing or reactive factor collects in one spot on or within the windshield glass and that, at a certain stage, this results in a minature explosion of a chemical, radiochemical or nuclear nature. This would "blow" out a small portion of the glass, exactly as if it had been pierced by some missile. My theory would perfectly account for the fact that no one has been or could be injured by the (non-existent) missile. And, there is of course no missile to pierce the back of the car on the way out. Minature explosions within the glass! It can and seemingly does happen at certain critical focus-points on or within the glass. If the focus-point is somewhat less than critical, the glass may merely shatter, in a starlike pattern. A multiplicity of still less critical focus-points would result in an overall pattern of damaging pock-marks. As and when these minature explosions occur near or on the surface of the glass, it may merely cause little parts of the glass to flake off and this has been actually observed by many motorists, just as they happened to be watching the windshield.

So much for a radiochemical and radioactive theory of what is back of the windshield mystery.

B - FLYING SAUCER RADIATIONS OR BY-PRODUCTS: In this, second, theory the modus operandi of the glass damage, via minature explosions, etc., within the glass, would be similar or exactly as in Theory-A, above, except that, the responsible radiations or substance in the air would originate from Flying Saucers, spacecraft or, more properly speaking, Aeroforms.

(First): This could be the result of some normal or cumulative effect of Saucer craft operation, propulsion, etc., in our atmosphere. This is normal (unless something new has been added) in terms of some form of exhaust wastes, disintegration of matter, dematerializations, etc., with no premeditated end results as far as we and our glass is concerned. This aspect trails off into Etheric and superphysical reactions, a realm of study in which orthodox science is relatively illiterate and with which it has little patience. Or....

(Second): As far as Saucer craft are concerned, this could be the beginning phase of some sort of intervention by the Saucerians. The windshield incident might thus be the initial and primary effect of a much larger and different objective, motive or plan envisioned by the Saucerians, which is yet to come into full evidence.

Since the Saucer space visitors are undoubtedly thousands of years ahead of us in science and in many other ways, they would be masters of radiations, nuclear and chemical reactions quite unknown to us. I repeat that, if the phenomenon thrust upon us is premeditated, it is inconceivable that they would be interested in any such triviality as merely spoiling acres of earthian glass. It would be, on the contrary, purely incidental or accidental to a larger plan or objective of some kind.

Their mastery of science includes mastery of the magnetic forces of the universe, for propulsion and other purposes. Substances or Saucer radiations that would affect the magnetic principles of our matter in general or Silicon, etc., in particular, might cause such minature explosions in the glass as I have postulated. It is interesting to note that, according to press reports, some investigators found that some of the particles gathered from windshields seemed to be of a metallic nature and that some of them were attracted and some repelled by a magnet!

The Borderland Sciences Research Associates, of San Diego, California, who have made an intensive study of Saucers for about eight years, and who have known about and have been publicizing the possibility of Saucerian intervention of some kind, have been saying that such intervention would mainly be for the purpose of convincing us Earthians that we have no monopoly on the solar system and that we cannot be permitted to foul-up this planet and other dimensions of space with atom-bomb tests or atomic warfare.

I will now touch upon the possible grand finale of what may yet become a drama of cosmic impact to our planet. What may the glass damage phenomenon be leading up to?

Suppose that my theory is correct: that the Silicon in the glass is the vulnerable ingredient and that its chemical or nuclear disintegration is the cause of the minature explosions in the glass. Any physicist can tell you that Silicon is a "semi-metal", i.e., that it has properties common to metals and non-metals.

Now, suppose that, in terms of Saucerian intervention, they are merely experimenting on the Silicon of our planet and that the Silicon in glass is the most vulnerable. No one can foresee how far the Silicon test or experiment may yet go ... whether, in time, it might affect the Silicon in plants, in our bodies, etc. But... !!!

Suppose, now, that the test, experiment or phenomenon is switched to some other metal of our planet! Other metals, close to Silicon in the Periodic Table of elements, could follow suit and exhibit new properties, degeneration, etc. However, sooner or later, the more important metals to watch for weird effects are Iron, Nickel, Aluminum, etc. Not only for signs of weakness, degeneration or "metal disease", but,also,for signs of radiation .

Whether such "metal diseases" become rampant due to new and un - known reactions from A-bomb tests or as an intervention from space visitors; it would so dramatically change our ways of life that warfare in general and atom-bomb war in particular would become impossible. There would or may have to be frantic emergency programs set up to cope with the new status quo of civilization. Humanity might have to go back to something equivalent to the bronze age. BUT... it might be worth it (at least the Saucerians may think so) if it will bring humanity back to its senses and a new appreciation of the simple things of life. Transportation, manufacturing, communication, amusements, etc. as we know them now, would become things of the past. We can ponder over what would happen if our thousands of miles of steel rails should begin to exhibit signs of metallic degeneration or radiation. One sign of such times would be a rapid rise in the index of air crashes. Those English Comet transport planes, three of which seem to have disintegrated around 30,000 feet -- did they happen to pass into a strata where the "metal disease" is already more prevalent and to which that type of plane is more susceptible? What would happen to steel-girded skyscrapers, bridges, motorcars, etc., if some sort of metal degeneracy infected them?

Over twelve years ago the writer included in a treatise written by him, a prediction on purely logical grounds of the occurence of a creeping metal "disease", which would cause all metal constructions to crumble of their own weight. What is now happening to car windshields may prove to be a very important corroboration of this.(As I write this, April 20, 1954, press reports have it that the windshield pitting has now reached Buffalo, N.Y.)

If this glass damage phenomenon is the prelude to more serious intervention, by space beings, known and more or less expected by some circles of Saucer researchers, and if one or more other metals

or semi-metals become infected; we can well pause in wonder and respect at the unexpected neatness of that kind of intervention. No public threats or blustering on the part of the Saucerians. No violence, no explosive upheavals of the scenery, such as they are capable of bringing about.

Just a subtle and silent crumbling or degeneracy of one or more of our metals, apparently beginning with Silicon. If some other ingredient of glass happens to be involved this would not change the picture I have drawn in the least. One element is as important as another in that respect.

If anyone reading this paper feels that I am over-dramatizing or indulging in a saga of scientifiction -- first, let's wait and see. Second, what I have said and postulated here is not one bit more weird or fictional sounding than the coast-to-coast rash of press reports of what is happening to car windshields and other kinds of glass, with no end in sight, at this writing.

-- Edward S. Schultz

CONCERNING THE ROLF TELANO COMMUNICATIONS

A Corrective Memorandum, by Rolf Telano and the Communicators.

(Some of the most remarkable and instructive material we have ever received concerning the aeroforms and the entities using them, has come via our Associate Rolf Telano. R.T. is a qualified technician or engineer in radio-electronics, and has never employed his psychic gifts for profit or in a public manner. In October, 1952, he sent us material from which we compiled an 11-page brochure (Release "1-B-52") which had a third printing in January, 1954. The prefatory page to this states that the principal thesis was that "the disc - shaped craft are operated by excarnate humans now living on the Etheric Venus (not on the astral)".

The trance control Yada Di Shi'Ite advised us that the brochure could be released "but with the utmost circumspection". He added that the subject was so complex that any information received by us would be inadequate, though not necessarily wrong. Later, in August, 1952, he stated that "none of the Discs were operated by excarnate humans". He did not impugn the veracity of Rolf Telano but felt that there was a misunderstanding somewhere. This acute insight on the part of the Yada has now been substantiated by the R. T. Communicators themselves, as the following document bears witness. The whole episode is instructive and profitable, and we are greatly indebted to the etheric communicators, to the Inner Circle of the M. P. Controls, and to our Associate Rolf Telano, whose singular gifts and painstaking accuracy have made this information available. *

* Note: Release (brochure) "1-B-52" is still available at BSR-Headquarters. It contains six pages from the etheric communicators, comments by the Yada, a letter from Rolf Telano, a "further note on humans in Etheria", a letter from "Borealis Telano", and a short commentary by the M.P. Control Lo Sun Yat. (12 pages, $8\frac{1}{2}$ x 11-$1.00).

EXCERPTS FROM LETTER - ASSOC. ROLF TELANO to the B.S.R. DIRECTOR:

"..... Regarding the "excarnate humans" -- it would now appear that they did not describe themselves as such, but, rather, that I so described them -- and that the description is in error. This was partially due to misunderstanding on my part, and partially due to my incorrect use of certain words in my article. The corrected version is as follows:

They didnot originate on Earth, or on any planet with a similar vibrational level. They have always been high plane dwellers. They have never used the word "etheria" in any communication, although I assumed (and still assume) that the place they describe is what you term "etheria". Their own name for their dwelling place has always been "heavi'n".

"Heavi", like our "heavy", means "dense". "'N" is the abbreviation of a source concept. The free translation into English would be: "A place of great density, from which we originated." Since great density would also be high vibrational frequency, it would seem to me that this would be "Etheria", or something very close to it. It seems that the same places and planes have several different names in some cases.

They came to Earth before there were any native Earthlings on it. In fact, they came for the purpose of bringing life, including human, to Earth, and guiding it until it was able to shift for itself. To do this, they had to bring themselves to the Earth-plane level. I regarded this as "incarnating", but they have since corrected me, and said that it was not an "incarnation" as the word is used here, since they did not enter Earth-born bodies. Their bodies were the same high-plane bodies which they had always had, only converted down to this level for the time being, much as is done with the Aeroforms at present. The "time being", as I understand it, was several thousand years, which is a "long time" to us, but only a brief interlude in their time-concept.

There were a few cases where some of their number actually left their high-plane bodies for a time, and entered Earth-born bodies. These were the "surface observers", who lived among the Earthlings. It seems that it is more difficult for an isolated individual to maintain himself on this level than it is for a group. He must constantly exert mental power to keep "tuned in", which diverts considerable mental power away from other uses. In these cases it was formerly the custom to actually incarnate these few.

However, they point out that this did not make him an "Earthling". The material body is not the individual, and the real entity who was temporarily wearing the body would still be a high-plane dweller, and would return to a high-plane body upon his return.

As I said, this was occasionally done formerly. In comparatively recent times ("recent" again in their time concept) they have con - structed a mechanism at their Lunar base which transmits a simulated mental ray, which they call the "master pulse wave". This is the proper frequency to convert them to this level or plane. All the Aeroforms, and surface observers, have a simple mechanism which will enable them to "lock in to synchronism" with the master pulse. This will automatically keep them at this vibrational level without any further thought on their part. They can, at any desired time, cut out the mechanism, and assume mental control over their vibrational level.

My contacts corrected me on this point some time ago but, since it required a rather lengthy explanation, and I was rather busy, I did not pass it along. As a matter of fact, I regarded it as a very minor point. Recently, however, I have received some correspondence from people who seem to feel that this is a basic difference, and that it impugns the B.S.R.A. Etherian hypothesis - so I haste to pass it along. As I see it, the corrected explanation is quite compatible, and would tend to confirm the Etherian hypothesis, rather than attack it.

To sum up, they regard themselves as "humans", but apparently in a much broader sense than it is ordinarily used, because they were never Earthians, but have always been high-plane dwellers. To them, a "human" is a being on any plane who employs a thinking and reasoning process similar to our own.

They have also pointed out to me recently that their appearance, in most cases, is not a "materialization" and "dematerialization", in their definition of the words. They regard "materialization" as creating matter from pure energy. Teleportation does actually employ a "dematerialization-materialization" process -- but they regard your term of "emergence" as more correctly describing the process in ordinary cases. That is, they are "there" all the time -- they are quite "solid" all the time (to themselves). They described it with a quite simple analogy, which might be of some use to you in describing it to others:

If you travel from New York to Washington, your reality has ceased to "exist", so far as the New York range of perception is concerned. Yet, you are the same "you" as you have always been, and you are quite "real" to yourself, and to anyone else on the Washington range of perception. It is exactly the same with the Aeroforms, except that, instead of travelling on the horizontal surface, they are travelling up and down the vibrational scale.

Since they have a much wider range of perception than we, it is possible for them to raise their level just slightly above the upper limit of our range, but still stay within their range. Thus they can observe without being observed, if desired. The Aeroforms over Washington, which went out of visual sight, but remained within "sight" of the radar, was an example of this. The radar has a much higher range than our eyes. I would assume that these relatively slow mutations which some have observed might be some Aeroform occupant sort of "fishing around" for this marginal level.

REPORTS FROM THE DELAWARR LABORATORIES
of Oxford, England.

COSMIC THERAPY (a 5-page brochure, illus.).

"Cosmic therapy is a branch of science which has been developed from an intensive study of fundamental forces. The source of each living cell in the universe has been discovered to be a process of materialization of energy particles. Certain laws governing this process have been determined and by means of suitable apparatus this energy can now be utilized in the service of mankind. Research at these laboratories over the past 12 years has made these things possible.

"It is an accepted tenet in science that when matter absorbs energy it may be partly re-emitted as radiation. The work at Oxford has shown that there is a waveform of radiation which is specifically related to the shape and chemical structure of the radiating body. In the biological sphere tissues were found to emit energy waveforms consonant with their own cell structures, and that a disease radiation was additive to the normal cell radiation. A technique has now been worked out enabling very precise diagnosis to be made as each disease does in fact radiate its own characteristic waveform. The process is one of photographic detection of these waveforms, and an actual force-field photograph can be taken of the condition of any cell group in the body, since the photographic plate records not only the pathology but the regional tissue as well. Thus lesion and tissue radiation are simultaneously reproduced in their correct relationship.

"In evolving this apparatus and developing this camera, the scientists at the Delawarr Laboratories have made so tremendous an advance in medical diagnosis that it is almost sensational. It is not to be confused with X-ray photography which is an entirely different thing and is limited in application. Whereas X-ray records the shadow of opaque ob - jects the Delawarr camera photographs the radiation field of any object. The latter gives radiation pattern approximating in shape and size but accurately portraying by its intensity of reproduction the amount of disease present. It is a representation of the condition of the patient rather than a photograph of dense matter in a measurable sense. The camera, unlike X-ray, is able to photograph soft tissue, as it in no way depends on tissue density for its results. . .

"Photographs" (in the illustrations)"were taken by tuning the cam - era to detect these conditions (tuberculosis, ulcers, cancer) specifically, somewhat as a radio is tuned to a broadcast. If the disease had not been present the camera would not have produced a photograph...Very early stages of disease can be detected. The camera requires only the blood or sputum specimen" ...'The specimen is not analyzed but is used as a means of tuning in directly to the patient. It has been proved that there is a condition of resonance between the patient and the blood or sputum specimen. The patient need not be present, but wherever he may he, he should remain still while the photograph of the specimen is being taken (requiring only a few minutes). This camera is invaluable

also in the veterinary field.'. . .

(Reproduced photographs in the brochure show (a) iron wire and stone in a cow's stomach, and (b) the same objects after removal by surgeon.The wire if straightened would be about 15 cm long; the stone is about one by .5 cm in size, in the photograph. THE COW WAS 40 MILES FROM THE CAMERA but "distance is no deterrent in this form of diagnosis".

"Each organ emits its own waveform and is therefore sensitive to such form of radiation- it is tuned to receive a specific waveform. The Delawarr Colorscope (illus.) is a treatment instrument which causes cosmic particles to be manifested and given the specific waveform required. This energy pattern is then transferred to a light beam of an appropriate color and projected at the patient. It provides access to 110,000 combinations of color and approx. 3500 waveforms... The selection of suitable wave - forms by skilled operators will even treat virus diseases ... A photo - graphic service run by the Delawarr medical staff is available to medical practitioners until cameras are available for sale to hospitals....

EVIDENCE OF RELATIONSHIP BETWEEN THE PATIENT AND HIS BLOOD SPECIMEN: A second Bulletin by the Delawarr Laboratories. Four pgs., illus. "The Laboratories have been engaged for several years in the detection of radiations from organic specimens in a stable magnetic field. The results show that given certain conditions there is a state of resonance between the blood specimen and the patient, and also between the expressed juice of a plant and the plant itself. This has led to the discovery of an underlying basic principle governing life in the cell. The importance of the effect of the magnetic field became apparent when photographic methods were employed for detecting radiations from a leaf. There was a critical position in which the leaf might be placed in the earth's magnetic field and cause fogging of a photographic film ... this was the position in which there was resonance with the plant from which the leaf came. . . .

"This critical placing of a leaf was also found to apply to the expressed juice of the leaf dried on filter paper. Human blood was next tried but to obtain comparative results it was necessary to introduce a second magnetic field . . . Resonance between a patient and his blood specimen has been shown experimentally while the patient was in Durham and the specimen and apparatus in Oxford". . .'Evidence strongly suggests that the patient is in resonance with some other source of energy ... a particle radiation of an extra-dimensional origin .. that there is no spatial wave between specimen and patient, but a simultaneous manifestation at the two points when resonance is established...'

Dr. (Geo. W.) de la Warr also writes the BSR Director: "We have effected the materialization of energy particles in a controlled magnetic field and would agree that the materialization of "saucers" at certain positions in the earth's magnetic field is entirely possible,"

It would take some hundreds of pages to do half-justice to the implications of these reports from the Delawarr laboratories. "There is a sound of a Going in the mulberry tops".

M.L.

From letter from John J. Williamson, Archer's Court Hastings, England. --April 14, 1954

- -

"Desmond Leslie, Dr. Benham and I have been working on testing the radiation for Flying Saucer photographs, and have found:

1. That they are of metal, possibly an iron alloy.

2. That they have been contacted by life, and show living things. INSIDE THEM.

3. That the Coniston (England) saucer photographed by 13 year-old Stephen Darbishire and the Adamski saucers are the same from radiation and from proportion points of view.

4. The rock-ridge picture is negative the 'saucer' tests as a rock.

5. A streak of light photographed against the Moon is neither reflection nor vapor.

6. Saucers seen leaving the cigar-shaped mother-ship have a higher inherent energy content than all others.

All technical data I have given is published in a semi-scientific report from us - $1.00 post free, Archer's Court Hastings, and we are actually the first in the world to prove this material. It would not have been possible if it were not for the patient work of Dr. W. E. Benham and the newly developed aura biometer which measures auras.

You can go ahead on this data and issue it to anyone...refer them to us and we'll answer all possible questions. I hope."

* *

From correspondence of E.S.S. (BSRA): Concerning the sooty or carbon-like stuff found on the (pitted) windshileds, I can add something interesting as to the possible role of carbon in this matter. A technical report not long ago, was to the effect that carbon or graphite used in an atomic pile (and thus bombarded with neutrons) gained a new property - a piece dropped on the floor burst into a fierce and strange kind of flame. Carbon in the atmosphere, acted on by radiations of various kinds, might possibly develop highly concentrated heat and react with some ingredient of the glass, perhaps silicon." (NOTE; the explanation given by the Natalli Control is not in any basic conflict with that of Assoc. ESS. ml.). Our Assoc. also reminds us of a passage in the Edna Thompson prophecies concerning degeneration of metals from radiations etc. in the air.

NOTES ON MINERAL DOWSING

- by R. D. Carse -

Inasmuch as the history of mineral dowsing has been predominately inaccurate when it is an accepted fact that individual response of the elements can be obtained, good reasoning indicates there must be complications in nature that need clarification. We will concede that dowsing, parapsychology, psychic, spiritistic, and the use of our more recognized five senses are all dependent on the individual's ability to use to the fullest extent the intricate electronic system of the human body. His ability to receive and interpret the multitude of forces surrounding him can depend on inherent advantages or development of latent powers, or both. These abilities cannot be developed in the presence of a prior conviction that they are non-existent any more than we can expect to see if we refuse to open our eyes. It has been because of these differences of the individual, that it has been almost impossible to correlate dowsing response.

I can only present my experiments and research as a possible help to others, in the light that they may not be applicable to all dowsers, but that they may give a clue to the complications of the elements and thus help others solve their problems. As I must be brief I shall only give important findings without the detail which led to their discovery.

Each element is distinctive in the forces of which it is composed and can be segregated by dowsing response. The activator used (sample) must not contain the wave length frequency of any other element. We cannot broadcast "yes" and "no" on a radio program and expect the listener to receive only "yes". Thus the use of a gold coin or ring to locate natural deposits of gold is decidedly hazardous. We shall use gold as an example but the following theory holds true in all minerals including oil. Even though an impure activator of gold will respond to an actual gold target, it is no assurance that in testing and getting response in an unproven area that gold is present. In the absence of gold any of the occluded wave lengths in the activator will naturally give response if that element wave length is present in the prospected area. An activator must be checked against all other elements (pure) to ascertain that they are not present. Assay or spectograph of the activator is no assurance of its dowsing purity.

If the gold activator is pure it can still give response to targets that are not recoverable as gold by present accepted methods. Gold is not one individual force but consists of the combination of many which are distinctive of gold but must all be combined to produce gold as we recover it. These forces of gold do exist in nature individually or in partially formed groupings which will give dowsing

response as all are included in the pure gold activator used. A re - covered target of this incomplete nature used as an activator will give response to any actual gold target proving that gold wave length does exist even though that target will not assay.

It is possible by the use of the human sending beam to partially separate these forces and implant them on filters which can be used for activators. The first division separates the two major forces which I have designated as the positive and negative, or the Plus and Minus Theory. That some force is divided is evident. Gold will give response to either the plus or minus filter. Either the plus or minus filter will give response to gold, but neither the plus nor minus will give response one to the other. A pure gold activator giving decided response to the plus or minus filter is direct evidence that a gold target can be located which does not contain recoverable gold.

By using the plus and minus filters in the field some 75% of the targets refusing assay that had been located using a gold activator were eliminated. In spite of this advantage in some two years in the field many mineral samples were acquired that responded to their respective plus and minus but still would not assay, although the ore looked decidedly favorable.

The next step was dividing the basic plus and minus filters to end point individually. Gold resulted in twelve divisions, six plus and six minus. All will respond to actual gold but refuse action to each other. By using all of these on the accumulated samples refusing assay they were all eliminated.

For convenience we might visualize the gold nucleus as a point with an unknown number of positive and negative rings each of which is an individual gold wave length, any of which can occur in nature separately, but must all be combined to form recoverable gold. Is there little wonder that conscientious dowsers were making locations of buried treasure, lost mines, mineral deposits and oil finding nothing recoverable after exploration? Only time and experiment will tell us if using all of these separated factors individually will give accuracy, but at present I am quite certain that a high percentage of mistakes can now be avoided.

- end -

(R.D. Carse, BSRA - 933 West Church St., Santa Maria, Calif.)

CORRESPONDENTS

Assoc. Lloyd Mann:

We had last week the phenomenon of pitted windshields here about Cincinnati. It was similar to that on the N.W. coast, and the only significant thing I have been able to gather is this: a woman who lives in a suburban area toward the east observed a fall of tiny granite-like pellets that 'sizzled' and 'fried' and hopped about as they struck the ground. It might be that the pellets are highly electrified and break glass by a powerful electrical discharge. . . (Loveland, Ohio)

Assoc. Wallis V. Salt:

We have the windshield pitting problem to the front again, and because of the number of bomb explosions there are free atoms around looking for a home. New associations are found in atom combinations, and those seeking residence in glass leave their entrance mark. I believe they are attracted there by the metal surrounding the glass, much like the action of the solenoid magnet in attracting and centering its armature with the field lines of force. The atoms are entering other structures also and causing mutations to occur that we will hear of in many ways, good and not good for us. Who is to say that this atom release will not be the cause of the entire coming change in everything - in life in all forms and in the earth itself. This thought can go on in endless words (Los Angeles, Calif)

Assoc. H.T.Wilkins:

H.T.W. is inclined to be very short-tempered with "syrupy yarns" about the benevolence of the Space-People (some of them, anyhow). "I think there is a very disturbing pattern - entities around that emanate from no planet benign, whether or not it is pale - or at least the benignity stops short of our own planet earth." He quotes a news item of May 2, 1953:

'A British Comet-Jet airliner, London to Singapore, crashed almost immediately after taking off from an airdrome near Calcutta. A British Inspector from the British Govt. Ministry of Civil Aviation said that the liner came into collision with some very large and heavy unknown object in the air. His report was promptly hushed up, but examination of the wreckage did not clear up the mystery. . ."

H.T.W. quotes several other equally disturbing instances, and by no means rules out the possibility of invisible but entirely substantial "saucers", and of deliberate policing of skyways against intrusion in certain areas. There have been several reports of landed or 'near-landed' Discs which were almost entirely transparent - barely visible but tangible enough to leave traces - things not written up by us or anybody else, for obvious feasons... Once again, these mutants or convertible densities and shapes point clearly to the etheric nature of the aeroforms, not to any familiar form of matter. (ml)

(Assoc. HTW resides at 29 Bean Rd, Bexleyheath, Kent, Eng.)

"Water drops" out of a clear sky reported from Key West - they ateholes in a windshield. Clip from Assoc. H.M.Powers.

- - - O B I T - - -

To Meade Layne, Editor Round Robin:

I am writing to tell you that MARGARET WHYTE passed on here, on Easter morning, April 18, 1954. Her "Letter to Friends" came out in the current"Clips, Quotes, Comments." Margaret had a host of friends and many she helped along the way. I thought you would like to know this.

Dr. Christine Sherlock.D.C.
Goshen, Indiana. April 29.

"She ever kept the Gates ajar That gleams of Light might enter".

* * * * * * * * * * * * * * * * * *

Corresp. of Assoc.
H.S. Conard: ". . . The authorities, the politicians, the leaders and teachers are so afraid of the people becoming hysterical and panicky - and so they do not want the public to know what is going on. The people suspect things but they don't know. Supposing that aeroforms should land all over the country and people should become hysterical and panicky. Do you think the fact that they have been kept in ignorance is going to be a help in controlling them?

It is fear of the unknown - of changes in employment and security, of the life hereafter and of many things in this life - that haunts people. FEAR! And if fear of the unknown is to be taken away it must be done by giving the people the facts, from infancy upward. It is wrong to deceive them, to suppress certain knowledge because 'they are not ready'. Whose fault is it that they are not? Which would be worse - mass hysteria or mass resentment and rage? I think the latter, because they would have some knowledge of what caused the resentment and would perhaps resolve to do something about it in no uncertain way." (Port Orchard, Washington)

(Kyrie Eleison - Kristie ElIeison!)

Correspondence, con.

Dear M.L The following article appeared in the April 26 issue of Indianapolis News, under Dorothy' Kilgallen's column:

Officials of one of the nations's most important cities (east of the Mississippi) are playing it down as much as possible, but they're more than a little worried about the "unidentified flying objects" seen over their roof tops in the last months. Official word of the unexplained phenomena has been suppressed to avoid creating panic, but they have summoned a scientist from Washington to observe, and if possible analyze the situation.

Thought you might be interested. (Assoc. Margaret Holtman).

Yes, we're interested, and have been for years past and expect to be be for a long time to come. About the (implied) censorship, it is still unobtrusive but very real and effective - judging by the complete ab - sence of printed news about the aeroforms, which are as active as ever.

Re 'Saucers' and religious concepts, a midwest magazine observes: "Even before 1954 is over revelations of an unquestioned character may be forthcoming, that the so-called after-life is as contradictory to Protestant doctrine as it is, or has been, to Romanism. If electromagnetic conditions become general throughout the earth, permitting the lowering of vibrations to where re-materialization is as common as snapping a house button for light, both Churches are fated for an eloquent silence that may begin most suddenly. If this, or the development of space travel prove beyond a doubt that heaven is as incongruous as hades, we shall have to look for a new concept of holiness. . ."

(quoted by The Little Listening Post, Clara L. John, Ed.)

(Now according to Yrs Truly - M.L. - this is indeed what is going to happen, and is happening - and not only in the field of (so-called) religion, but in philosophy and science and all basic human thinking. Now, can such a great death (of ideas) take place without convulsions and last agonies? The most elementary self-knowledge, the most common of commonsense thrusts the great NO in our faces. It is just for this reason that BSR has tried so long, to reach a few individuals and groups of mature people, free from dogmatic fixations). ml.

"The most important thing, as I see it, for BSR Associates as the most advanced of our people, is to remain calm and adopt an attitude of watchful waiting - and above all, to be patient . Occidentals, and Amer- icans in particular want things to happen quickly, even though the re- sults may not be wholly satisfactory. There is very little they can do now - in fact, activity might do more harm than good, since they do not know either the long-term plan or the temporary expediencies. I concur with the Yada's advice, to "go slow."

(Assoc. RMH - excerpt from letter)

NEWSPRINT FROM CAPETOWN, S.A. reports an interview with a Mr. and Mrs . Parvin, London spiritualists on a lecture tour, concerning an "incredible machine" now operating in London, which "gets messages from the planets via the spirit world."

"The man who made the machine isn't even an inventor, but a flying man - yet there it was - a machine without batteries and no electrical power, but speech came through it from outer space. The frequency was ultra-high and eventually we were convinced that the messages came from a planet called Strorp ... on a wave length that could not be jammed. No mediumistic means is used. It works free of the human mind; it is like listening to a wireless set." The "planetary" messages, however, seemed to be relayed through excarnate entities, who then spoke thr ough the apparatus. Many of these communications dealt with the "flying saucers".

It was asserted by the voices that "the flying saucers are brain-controlled - actually by three control-brains, and also by a mechanism." This assertion is of some interest, since Dr. G.L. also says that the craft, being of etheric matter, are subject to mental control, and the Rolf Telano communicators refer to some kind of 'station' or Base on the moon which the aeroforms can 'tune into' for converting their energy rates. The Mark Probert Controls have stated that this lunar base exists and is used somewhat as described.

"WINDSHIELD POX" HEADLINES:- ETC.

"Dozens of Cars Have Mystery Nicks" (Springfield, Mass. paper)... "Key West Has Pockmarked Windows" (KW Citizen) ... Resin Drops Scar Glass ... Greenhouses Fall Victim, Mystery of Pits Baffles Nine States.. Pitting of Windshields Hits Eleven Northwest Washington Cities ...

This "glass-pox" has now assumed epidemic proportions - and not a single worthwhile explanation has been advanced, EXCEPT for the one offered by the M.P. Controls, and its elaboration by BSR Assoc. E.S.S. This is no new situation, of course. We offered an explanation (now being widely studied) of the aeroform phenomena also, for the last eight years - almost without takers because it could not be summarized in 10 words and 20 seconds. The tide is turning, however - as it will also do eventually in the matter of the glass pitting.

CONCERNING MARK PROBERT: Mark and his wife have lately held meetings in Los Angeles and San Francisco, expect to visit Chicago and several other large cities, and will probably be in New York by the time this issue of RR reaches our readers. There is probably no more remarkable deep trance mediumship in the world than that displayed by him. We have studied this mediumship for eight years, have no word of adverse criticism, and take satisfaction in the increased recognition it is now receiving. To communicate with him, write to his address, 931-26th St., San Diego, Calif.-and/or Care of GATEWAY, 30 E. 60th St., New York 22, N.Y. "Attention of Mary Gorham". Orders for "The Magic Bag" should go to the San Diego address and will be filled there. BSRA Hdq. cannot fill orders for this book but will pass them to Mr. Dennis Kier, (931-26th, San Diego) who will handle as promptly as possible. ML

In connection with some of the following items, we wish to call attention to our bi-weekly publication CLIPS, QUOTES, COMMENTS; 6 to 9 pgs. mimeo. From time to time some short article may appear in both CQC and Round Robin, but apart from this there is no duplication. CQC issue "B-9" of May 1, '54 contains the following:

The Lodge of Light, Bul. #2. Gerald Light. Excerpts.
The Windshield Pitting Phenomenon - Ramond Natalli (M.P.Control)
Worthwhile Project (re the Vortexes). Assoc. C.M.Dorr
The Rolf Telano Communications (A corrective memo.)- & miscel.

On account of its importance we have used the last named article in both CQC and this issue of RR - but, to repeat, such duplication is exceptional. The circulation of the Clips & Quotes is much smaller than that of RR, and I think ALL of our Associates should receive the article mentioned.

The tempo of events is increasing so rapidly, that a bi-monthly publication (RR) does not keep 'you-all' sufficiently informed - although quite necessary for longer articles.

We have printed 20 issues of CQC and can supply back copies of about 15 of these. If you want one or two sample copies, let us know. We want to increase the circulation of CQC as a means of reaching our Associates as promptly as possible when news of importance is in the making.

FURTHER, MOREOVER, & HOWEVER - Anything can happen any time (so far as my guessing goes); according to our active reporter Ben Told there is an unobtrusive but effective censorship on press and radio, re the aeroforms. We get many items which do NOT appear in the press. For the sake of the record I here repeat (as rumour, please note) that several "Saucers" landed weeks ago at a well-known air base, where they have been under prolonged study - with the aid and consent of the Etherians who operated them. Not that our technicians are learning much, except the extent of their own ignorance. I reserve the right to believe this yarn myself, but of course can't prove it to you or anybody (just now), and so do not here assert it as a fact. Well, Powers that be might, in the interest of public safety or general welfare, clamp down with a complete and rigid censorship on all publications dealing with aeroform business. IF this happens, and RR chirps no more for a season, we can still send out a little news to you without violating any regulations or public security (if any). So, we lately suggested, it would be a good idea for each Associate so disposed, to send us (say) ten stamped & self-addressed envelopes. The idea is, to hold the BSRA together to some extent, for service and cooperation - as has been our main idea for years past. Please don't overlook the suggestion just referred to.

Bed-time Story for everybody: IF a "disease of the metals" got going, so that steel, copper, aluminum et cet, crumbled up like bread-crumbs -- well, what would become of civilization without metal, machinery, apparatus. "This old bitch gone in the teeth" (to quote a modern poet) would have taken her last bite. This is what comes of thinking about silicon, mesons, the semi-metals, windshields etc. (This paragraph is by Ben Told - not me. ml)

SOME MAYBE-USEFUL REFERENCES:

Waves that Heal: by Mark Clement. A short account of the theories of George Lakhovsky, with results obtained in the treatment of plants, animals, and human beings. (London. Sold by Health Research, Box 461 W. Pasadena 18-M. Paper, 63 pgs. Healing books rented, located, and sold). Price $1.75

A Radiesthetic Approach to Health & Homoeopathy: or, Health and the Pendulum. Use of the pendulum in the treatment of disease. By V. D. Wethered. London 1950. Sold by Health Research (sup.)

The Evidence for Spirit Healing. Harry Edwards. 574 pages, nearly all of which consist of reports of some 6000 cases of healing of so - called incurable diseases. Advertised by FATE magazine. $4.00

Proceedings of the Scientific & Technical Congress of Radionics and Radiesthesia. London, 1950. About 200 pgs and full of extraordinary information. Markham House Press, 31 King's Road, Lon., S.W. 3. Eng. Price 7/6, or $1.15

The Pendulum. A monthly review of radiesthesia. By F.A. Archdale and Egerton Sykes. Markham House Press, Ltd. (Sup.)

The Electronic Medical Digest. Quarterly. Editor, Fred. J. Hart. Electronic Medical Foundation, 1200 Hyde St. San F'co 9, Calif. In our opinion the best publication of its kind in the U.S. Contains in every issue matter of interest to BSR Associates. This Foundation is now being attacked by familiar and iniquitous alliance of the Food & Drug Adm. and the A.M.A., and deserves all the help that can possibly be given the Foundation.

Body Graph Booklet # II, by Dr. Charles Arthur Porter. Box 778, Elsinore, Calif. An unusual and interesting approach based on the work of Dr. Achille DiGiovanni. Booklets I & II, 20 pgs ea. - $1.00 each.

The Aurameter Book, by Verne Cameron, inventor of the instrument, is out of print (mimeo) and date for second printing cannot yet be set. The instrument itself can be had from Assoc. Cameron, along with instructions and explanatory material: price $15.00. BSR Hdqrs will accept orders, to be filled by Rev. Cameron - Box 1120, Rt. 1, Elsinore, Calif.

Radio-Perception, the Journal of the British Society of Dowsers, is published quarterly by the Society at York House, Portugal St., W.C. 2, London, Eng. Copy, 3/- (.50). -- about 60 pgs., excellent material. ***** **** ***** *****

PLEASE NOTE: the BSRA are not book dealers and cannot supply publications mentioned above. FURTHER, unless by special arrangement please do NOT send us lengthy manuscripts for criticism and evaluation. Some excellent material is sent to us, but we lack time, equipment, and funds for publishing it or making critical estimates. ML
